Last Updated Tuesday, 06 October 2009

Ash is steadily switching its TV system to digital transmission and reception technology. This offers more services, both free-to-view and pay, better reception quality, full widescreen, and interactive features. Some people receive it by cable, but most receive it through the air to an aerial (whether satellite dish or conventional roof top). To get Freeview, you either need to buy a special Freeview set-top box and connect it to your existing TV set, clear picture can supply everything including aerial installation, or consider getting a new TV that has a built-in Freeview receiver. We offer a range of other services in Ash - take a look at our services pages.
